Arc Web Browser Features

	Feature	Explanation
1	**Privacy**	Arc's privacy protection features help to protect your privacy while you're browsing the internet. These features include a **tracker blocker, a cookie blocker, and a built-in VPN**.
2	**Fast with Clean UI**	Arc is fast, loading open tabs is almost instantaneous. Discuss layout with sidebar
3	**Tab Groups**	Arc's tab groups allow you to **organize your tabs into logical categories**. This makes it easy to find the tabs you need and to keep your browser window clutter-free. **Favorite tabs appear above the split** in the sidebar, while your **open tabs appear below the split**. **Tabs can be renamed** to make them more understandable. New folders can be created and **tabs can be added by simply dragging them into the folder**. Hovering over a closed folder will offer a peak of what's inside the folder.
4	**Little Arc**	Little Arc is a **window that opens when you click a link from another desktop** app (like Mail, iMessage or Slack). Little Arc gives you a **quick way to open, view, and close a link without seeing all your other tabs**. It also allows you to triage links you want to save by letting you move them into your Arc Sidebar.
5	**Spaces**	Arc's workspaces allow you to create **different environments for different tasks**. For example, you could create a Space for work, a hobby, a project, a vacation or any other thing you can think of. Other then your favorites, each Space can have it's own tabs, name, color and emoji making it easy to keeping yourself organized. **Air Traffic Control** - Air Traffic Control helps you Route links to the right place when they're opened from outside Arc. For example, you can choose that all Google Sheet links opened from Desktop Apps like Slack or Outlook route directly to your Work Space.
6	**Profiles**	Arc's Profiles take Space's one step further. For instance, you can be signed into your **Gmail work account in your work Space and your personal email account on your personal Space**. Here are the things Profiles can include: • Authentication (logins, passwords, autofill). ° Browser History • Cache / Cookies ° Default Browser Selection • Favorites ° Extensions • Settings in arc://settings (such as Language or Download Preferences)

	Feature	Explanation
7	**Split View**	Split View allows you to **combine multiple tabs into one view** so you can multitask without all the extra clicks! When you create a split view, it becomes its own new tab in the sidebar that you can come back to later. You can add up to 4 windows in a split view.
8	**Archived Tabs**	By default Arc's Archived Tab feature **archives all open tabs after 12 hours** keeping the interface free of clutter. Click the Archive icon to see all of the tabs and windows that have been opened in Arc. This makes it easy to keep track of what you're working on and to switch between tasks quickly.
9	**Chrome Extensions**	Every **Chrome extension works with Arc**, many seem to work faster and better then in Chrome or Brave.
10	**Notes**	Arc's notes feature lets you **take notes on websites or web pages**. This is great for saving information for later, jotting down ideas, or creating a to-do list.
11	**Easels**	Easels are like **super powered whiteboards**. You can draw, write, or add images to them. Easels are for collecting your ideas as you browse the internet.
12	**Live Capture**	You can **add web snippets** to an Easel by taking a Capture. Command shift. **Live view** - Easels support Live View so if you take a Live Capture of material that **dynamically changes, like statistics, sales, receivables, etc,** the Easel will display the most updated information.
13	**Command Bar**	In addition to creating new tabs in the Command Bar, you can **type common actions you take in Arc**, like Pin Tab or Add Split View, to take actions in an instant and without moving your fingers to your mouse. Commands that can be used include: • / Pin Tab / Pin to [Space Name] • / Toggle Sidebar / Split View • / Google Doc / Rename Tab • / New [Folder, Note, Easel, Space]. / [Extension Name] • / Preferences / View Archive
14	**Keyboard Shortcuts**	**All of Arc's Keyboard Shortcuts can be edited** from within preferences.
15	**Video Mini Player**	**Click away from any tab playing video and a mini video player appears** at the bottom right of your screen. The screen can be re-positioned.
16	**Bonus - Boosts**	Boosts are a way to **personalize the web sites your visit frequently** then share your customizations with friends!
